SUMMARY

2nd-year Computer Science undergraduate at JSSATE Bangalore (VTU) with a CGPA of 8.7. Building production-grade AI systems at the intersection of backend engineering and agentic AI — designing systems where LLMs act as autonomous agents backed by scalable APIs, vector stores, and real-time pipelines. Co-organiser at GDG JSSATE-B.

EXPERIENCE

Technical Co-Organiser · GDG JSSATE-B (Google Developers Group) Sep 2025 – Present

- Co-organise technical workshops, hackathons, and developer events for a 300+ member community.
- Led team for Grand Hackathon (April 2026) — coordinated four-person build of ARIA, an MCP-based autonomous AI system.

Python Developer Intern · CODTECH IT Solutions Feb 2025 – Mar 2025

- Developed Python-based automation scripts and data processing pipelines.
- Contributed to backend modules and internal tooling during internship tenure.

PROJECTS

SWARM — Multi-Agent Cognitive Architecture — Python · Agentic AI · LangChain · LLM Orchestration

github.com/AnishAchutha05/SWARM

- Virtualises a single LLM into N concurrent agents, each assigned a distinct cognitive personality (analytical, adversarial, critical, creative, etc.) that reason in parallel — inspired by OS multithreading and swarm intelligence.
- Agents share a common blackboard memory pool, enabling emergent cross-agent reasoning and collaborative problem decomposition without direct message passing.
- Implements competitive scoring and evolutionary pruning: weakest agents are eliminated each round, strongest survive and influence subsequent generations — driving progressive solution quality.
- System dynamically determines its own agent count based on inferred problem complexity — no hardcoded concurrency, fully self-organising.
- Built for Grand Hackathon 2026 — sole architect of system design, agent orchestration, and memory architecture.

ARIA — Autonomous Research & Intelligence Assistant — Python · MCP SDK · Claude API · Tavily · NetworkX · BeautifulSoup

github.com/AnishAchutha05/ARIA---mcp-research-server

- MCP server that autonomously investigates any topic end-to-end in under 90 seconds — web search → scrape → extract → knowledge graph → synthesised brief.
- Built modular tool architecture: Tavily-powered search, httpx+BS4 scraper, Claude-powered insight extractor, and NetworkX knowledge graph builder.
- Integrated with Claude Desktop via MCP protocol; exposes a CLI client for standalone use.
- Hackathon project (Grand Hackathon 2026) — designed system architecture and led MCP server integration across four-person team.

EDUCATION

B.Tech, Computer Science · JSSATE Bangalore — Visvesvaraya Technological University (VTU) Sep 2024 – Oct 2028

- CGPA: 8.7
- Relevant coursework: Data Structures & Algorithms, OOP, Operating Systems, Computer Networks.

TECHNICAL SKILLS

AI & Agents	LangChain · LangGraph · Anthropic SDK · MCP Protocol · RAG Pipelines · LLM Orchestration
Backend	FastAPI · Spring Boot · REST API Design · SQLAlchemy · PostgreSQL · Redis
Languages	Python
Cloud & DevOps	Google Cloud Platform (GCP) · Docker · Linux · Nginx · Cloud Run
Tools	Git · GitHub · Postman · VS Code · Tavily API · NetworkX
DSA	Consistent LeetCode practice in Python — arrays, graphs, dynamic programming, trees

RECOGNITION

- GCP certified via Google Cloud Arcade programme — badges earned in cloud infrastructure and ML on GCP.
- Active LeetCode profile — consistent problem solving across arrays, graphs, DP, and trees in Python.
